

Security Program Management

Protecting your business and customer information is important, we all know that. Companies never intend to be insecure, but as businesses and the threat landscape evolve, organizations need to constantly reevaluate their risk profile and develop appropriate responses to stay informed and secure.

Business partners and customers expect the organizations that they work with to secure and safeguard their data and systems, as well as comply with industry regulations, laws, and guidelines for systems and data protection.

Good security is more than a combination of technologies and services; Online's experts can help you architect a scalable, risk-appropriate, and effective program.

We've all read the headlines and have seen what happens to organizations who fail to do so; the financial and reputational repercussions can be swift and painful.

That's where Online's Security Program Management services come in. Our suite of services is designed to help organizations create, implement, improve, and maintain a risk-focused program.

How Online Can Help

A common issue facing many organizations is that they simply don't know how much or what kind of security they need to protect their critical information and systems. In addition, organizations often don't have a clear understanding of their inventories and data flows of sensitive information. Our team of seasoned security practitioners work hand-in-hand with your business leaders to create strategies and business-centric solutions that align with your culture, people, technologies, and processes.

Security Program Management at Online

Security Program Management is ultimately about helping you manage your security posture, today and tomorrow. Our goal is to work with you to improve your business's security posture through a customized, sustainable and risk-sized program that aligns with your business. Depending on your current situation, this may mean developing an organization-wide security program or just fine-tuning your existing program, including writing or revising security policies.

Core components of Online's Security Program Management include:

- > Security program creation and management
- > Gap and risk assessments aligned with multiple industry, best practice, and compliance standards
- > Security awareness training
- > Virtual CISO services
- > Secure solution delivery life cycle and secure coding workshops
- > Security policy/procedure development and enhancement
- > Incident response program management and workshops
- > Disaster recovery/business continuity program management and workshops
- > Data classification, analysis, inventory, and mapping

Why Online Business Systems?

Online's reputation is built around our collaborative approach with clients. We work closely with you to gain a thorough understanding of your business model, critical data flows and repositories, network architecture, and systems/applications that support the business as well as your organization's regulatory and compliance obligations. This allows us to perform a thorough assessment of your security posture and more importantly, puts us in a position to make recommendations that align with your business, your culture, your people, and your technologies.
