SECURITY ADVISORY SERVICES: Virtual Chief Information Security Officer

online
business systems

Cybersecurity challenges are continually evolving. Adoption of cloud technology, implementation of Bring Your Own Device (BYOD) programs, and an expanding network of third-party vendors create new security demands for organizations of all sizes. Businesses find themselves under a lot of pressure to operate securely, while regulations such as GDPR and Payment Card Industry (PCI) require trusted security programs be in place and continually be updated. The risk to the organization of a breach has never been higher.

A Virtual Chief Information Security Officer has an in-depth understanding of the ever-changing threat landscape and can effectively analyze and mitigate risk.

Through Online's Virtual CISO (vCISO) service, we work with our clients to ensure that leading security measures are in place. Our Virtual CISOs become extensions of your leadership teams, participate in strategy meetings and develop policies and key security management documents - all with an eye toward communication and mentorship, reducing risk within the organization.

When might you benefit from a Virtual CISO?

> *You are rapidly growing and need a security leader to mature your security posture.*

> *Your organization doesn't require a full time CISO/Security Director but would benefit from part-time assistance to lead specific initiatives or oversee a security program.*

> *You recently lost a CISO/Security Director and require someone to lead the group while you look for a permanent replacement.*

Results. Guaranteed.

A vCISO implements a cybersecurity strategy aligned with your risk and technology demands.

The vCISO ensures that both the organization's data and your customers' data are protected with an effective, well managed security program that helps achieve:

> *A clear understanding of your security posture while aligning with business objectives*

> *An organizational security vision and strategy*

> *The secure adoption of new technologies*

> *The identification and prioritization of business risk relating to cybersecurity concerns and compliance (i.e., PCI, HIPAA compliance, etc.)*

> *The appropriate protection of information assets and technologies*

> *A matured, educated, and suitably staffed security team*

> *A plan of action to deal with security incidents should they occur*

> *Meaningful metrics that help the management and progress of your security program*

About our RSP Approach

Online Business Systems' reputation is built around the collaborative approach we take when working with our clients. We work closely with our clients to gain a thorough understanding of their business model, critical data flows and repositories, network architecture, and systems or applications that support the organization, as well as any regulatory and compliance obligations.

An Online Virtual CISO is tailored to the unique needs and requirements of each of our customers.

Competent cybersecurity professionals are in high demand across North America and finding qualified, experienced security professionals is difficult. Whether you are looking for a CISO, Security Director, or Security Manager to help lead your organizational security development, an Online Virtual CISO can help.
