

## TECHNICAL SECURITY SERVICES: Red Teaming

When an organization needs to identify what a more determined attacker can achieve, Online's Red Team services are deployed.

Online's Red Team service focuses on executing a longer-term strategy to identify gaps in an organization's defenses using Open Source Intelligence (OSINT) gathering along with any number of attack methods including but not limited to Penetration Testing, Social Engineering (Phishing/Vishing), and Physical Penetration Testing.

---

***By embodying the thinking attacker viewpoint of a cybercriminal, each Red Team engagement helps to provide organizations with a more realistic understanding of how they may be attacked and, more importantly, where they may have weaknesses that make them vulnerable.***

---

In performing Red Team engagements for clients, Online has seen first-hand how these situations can end up shedding light on areas of security that may not have been identified by more traditional penetration testing.
